11. a) Elaborately discuss the evolution of HR analytics and how it is applied ^{13,K4,CO1} in modern era of business.

OR

- b) With a schematic diagram analyze the various analytic framework models and their relevant usefulness for modern business ^{13,K5,C01} organizations.
- 12. a) Elaborate your answer how HR firms measure and test diversity and 13,K4,CO2 inclusion while sourcing candidates for their firms.

OR

- b) Describe how HR firms manage and overcome selection bias using 13,K4,CO2 recruitment and selection analytics.
- 13. a) Describe with an example about OPEN Analytical Framework for ^{13,K4,CO3} Effective On boarding process.

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create 21318

- b) Explain how firms analyze and evaluate effectiveness of training and 13,K5,CO3 development programs.
- 14. a) Describe a descriptive note on analytical performance management 13,K4,CO4 with their relative merits and demerits.

OR

- b) Describe your views how firms use retention analytics to protect talent. 13,K4,CO4
- 15. a) Describe the various approaches and process of implementing 13,K4,CO5 succession planning.

OR

b) Discuss the basic need and steps in meditation. Also explain the merits 13,K4,CO5 and demerits of interaction analysis.

PART - C $(1 \times 15 = 15 \text{ Marks})$ (Compulsory)

16. How to Predict Who's Likely to Leave?

William Wolf, managing director and global head of talent development at Credit Suisse, joined the global financial services firm 18 months ago to further enhance its people analytics—a role he performed for clients as a partner at McKinsey & Co. The HR department at Credit Suisse has collected data on employees during their entire life cycle for many years, but wanted to delve deeper into turnover.

For instance, HR professionals already knew who left, segmented by demographics, performance ratings, regions and so forth. They knew why people left from information captured in interviews one month post-exit. But they wanted to go beyond these data to identify those at risk of leaving before the decisions are made.

"We already had data collected after the fact on who left and the reasons they gave us," explains Wolf. "We needed to look at why we don't have the compelling employee value proposition to keep that person here and at who else is at risk. The best way to learn that is to study the specific circumstances prior to the points of departure."

Wolf assembled a small "people analytics" team made up of HR data analysts and a skilled quantitative methods expert he hired from a newly failed hedge fund to conduct predictive analyses.

OUESTION:

As a team member of HR data analysts, Conduct a predictive analysis pinpointing the various variables needed for Credit Suisse.
