Question Paper Code	12309
---------------------	-------

**MBA - DEGREE EXAMINATIONS, NOV / DEC 2023**

Third Semester

**Master of Business Administration**

**20MBO302 - PROJECT MANAGEMENT**

(Regulations 2020)

Duration: 3 Hours

Max. Marks: 100

**PART - A (10 × 2 = 20 Marks)**

Answer ALL Questions

*Marks,  
K-Level, CO*

1. Recall a project in the words of “Herold Kerzner”. *2,K1,CO1*
2. Define project portfolio Management. *2,K1,CO1*
3. Justify the important of a project scope. *2,K2,CO2*
4. Paraphrase the term project creep. *2,K2,CO2*
5. Relate WBS and network. *2,K2,CO3*
6. Contrast Risk and Uncertainty. *2,K2,CO3*
7. Recall Crashing. *2,K1,CO4*
8. List out any two advantages of PMIS. *2,K1,CO4*
9. Recall any two environmental factors affecting international projects. *2,K1,CO5*
10. Learning is an important closure activity- Justify. *2,K1,CO5*

**PART - B (5 × 13 = 65 Marks)**

Answer ALL Questions

11. a) Elucidate the Project portfolio management process with a suitable example of your choice. *13,K2,CO1*

**OR**

b) Assuming you as a project manager of a ‘chain of retail stores’. You have been assigned a project to open a new store in New Delhi. Explain in detail the various phases of the project before it is ready for usage. *13,K2,CO1*
12. a) Explain the various budgeting methods used to estimate a project. *13,K2,CO2*

**OR**

b) Illustrate in detail the project scope management. *13,K2,CO2*

13. a)

Activity	to	tm	tp
1-2	4	6	8
1-3	2	3	10
1-4	6	8	16
2-4	1	2	3
3-4	6	7	8
3-5	6	7	14
4-6	3	5	7
4-7	4	11	12
5-7	2	4	6
6-7	2	9	10

13,K3,CO3

Draw the network, find the critical path.

**OR**

- b) Elucidate the process of opportunity management in overcoming the barriers in a project.

13,K2,CO3

14. a) Illustrate the importance of project information management system in different phases of a project.

13,K2,CO4

**OR**

- b) Discuss the calculation of final project cost in a project.

13,K2,CO4

15. a) Explain the Project closure and wrap-up activities? Explain its importance.

13,K2,CO5

**OR**

- b) Distinguish between the agile and traditional project management with suitable examples.

13,K2,CO5

**PART - C (1 × 15 = 15 Marks)**  
**(Case Study – Compulsory)**

16. a) **Macon, Inc.**

15,K3,CO5

Macon was a fifty-year-old company in the business of developing test equipment for the tire industry. The company had a history of segregated departments with very focused functional line managers. The company had two major technical departments: mechanical engineering and electrical engineering. Both departments reported to a vice president for engineering, whose background was always mechanical engineering. For this reason, the company focused all projects from a mechanical engineering perspective. The significance of the test equipment's electrical control system was often minimized when, in reality, the electrical control systems were what made Macon's equipment outperform that of the competition. Because of the strong autonomy of the departments, internal competition existed. Line managers were frequently competing with one another rather than focusing on the best interest of Macon. Each would hope the other would be the cause for project delays instead of working together to avoid project delays altogether. Once dates slipped,

fingers were pointed and the problem would worsen over time. One of Macon's customers had a service department that always blamed engineering for all of their problems. If the machine was not assembled correctly, it was engineering's fault for not documenting it clearly enough. If a component failed, it was engineering's fault for not designing it correctly. No matter what problem occurred in the field, customer service would always put the blame on engineering. As might be expected, engineering would blame most problems on production claiming that production did not assemble the equipment correctly and did not maintain the proper level of quality. Engineering would design a product and then throw it over the fence to production without ever going down to the manufacturing floor to help with its assembly. Errors or suggestions reported from production to engineering were being ignored. Engineers often perceived the assemblers as incapable of improving the design. Production ultimately assembled the product and shipped it out to the customer. Oftentimes during assembly the production people would change the design as they saw fit without involving engineering. This would cause severe problems with documentation. Customer service would later inform engineering that the documentation was incorrect, once again causing conflict among all departments.

The president of Macon was a strong believer in project management. Unfortunately, his preaching fell upon deaf ears. The culture was just too strong. Projects were failing miserably. Some failures were attributed to the lack of sponsorship or commitment from line managers. One project failed as the result of a project leader who failed to control scope. Each day the project would fall further behind because work was being added with very little regard for the project's completion date. Project estimates were based upon a "gut feel" rather than upon sound quantitative data.

The delay in shipping dates was creating more and more frustration for the customers. The customers began assigning their own project managers as "watchdogs" to look out for their companies' best interests. The primary function of these "watchdog" project managers was to ensure that the equipment purchased would be delivered on time and complete. This involvement by the customers was becoming more prominent than ever before. The president decided that action was needed to achieve some degree of excellence in project management. The question was what action to take, and when.

**QUESTIONS:-**

1. Where will the greatest resistance for excellence in project management come from?
2. What plan should be developed for achieving excellence in project management?
3. How long will it take to achieve some degree of excellence?
