Question Paper Code	12680
---------------------	-------

**M.E. / M.Tech. - DEGREE EXAMINATIONS, APRIL / MAY 2024**  
 Second Semester  
**M.E. - CAD / CAM**  
**20PCDPC202 - ADVANCED FINITE ELEMENT ANALYSIS**  
 Regulations - 2020

Duration: 3 Hours

Max. Marks: 100

**PART - A (10 × 2 = 20 Marks)**  
 Answer ALL Questions

*Marks*<sup>K-</sup>  
*Level* *CO*

- |  |   |    |     |
|--|---|----|-----|
| 1. List the various weighted residual methods.                     | 2 | K1 | CO1 |
| 2. Compare the Ritz technique with the nodal approximation method. | 2 | K2 | CO1 |
| 3. Define two-dimensional scalar variable problem.                 | 2 | K1 | CO2 |
| 4. Compare CST and LST elements.                                   | 2 | K2 | CO2 |
| 5. Define the term “resonance”.                                    | 2 | K1 | CO3 |
| 6. Write the types of vibration.                                   | 2 | K1 | CO3 |
| 7. Define heat transfer.   | 2 | K1 | CO4 |
| 8. Write the FE equation for tapered fin.                          | 2 | K1 | CO4 |
| 9. Draw the graph for stress and strain curve for mild steel.      | 2 | K2 | CO5 |
| 10. What is material Non-Linearity?                                | 2 | K1 | CO5 |

**PART - B (5 × 13 = 65 Marks)**  
 Answer ALL Questions

- |  |   |    |     |
|--|---|----|-----|
| 11. a) i) Explain the various methods of engineering analysis with suitable illustrations. | 8 | K2 | CO1 |
| ii) Describe the principle of stationary total potential energy.                           | 5 | K2 | CO1 |

**OR**

- |   |    |    |     |
|---|----|----|-----|
| b) Solve the differential equation for a physical problem expressed as $d^2y/dx^2 + 100 = 0, 0 \leq x \leq 10$ with boundary conditions as $y(0) = 0$ and $y(10) = 0$ using (i) Point collocation method (ii) Sub domain collocation method (iii) Least squares method and (iv) Galerkin method.                | 13 | K2 | CO1 |
| 12. a) For a 4-noded rectangular element shown in fig. Infer the temperature at the point (2.5, 2.5). The nodal values of the temperatures are $T_1 = 100^\circ\text{C}$ , $T_2 = 60^\circ\text{C}$ and $T_3 = 50^\circ\text{C}$ and $T_4 = 90^\circ\text{C}$ . Also determine the $80^\circ\text{C}$ isotherm. | 13 | K3 | CO2 |

**OR**

- b) Calculate the element stiffness matrix and temperature force vector for the plane stress element shown in fig. The element experiences a  $20^\circ\text{C}$  increase in temperature. Assume  $\alpha = 6 \times 10^{-6} \text{ C}^{-1}$ . Take  $E = 2 \times 10^5 \text{ N/mm}^2$ ,  $\nu = 0.25$ ,  $t = 5 \text{ mm}$ . 13 K3 CO2

13. a) Determine the eigen values and frequencies for the stepped bar shown in fig. take  $E = 30 \times 10^{10} \text{ N/m}^2$ , sp.weight  $= 8500 \text{ Kg/m}^3$  13 K3 CO3

OR

- b) Derive the equation of lumped mass matrix for the beam. 13 K3 CO3

14. a) For a 3-noded linear triangular element shown in fig. determine the isotherm corresponding to  $46^\circ\text{C}$ . The temperature at node 1, 2 and 3 are  $40^\circ\text{C}$ ,  $52^\circ\text{C}$ ,  $44^\circ\text{C}$  respectively. 13 K3 CO4

OR

- b) Derive the thermal stiffness matrix for 1 D steady state pure heat conduction element. 13 K3 CO4

15. a) Explain incremental procedure to handle material non-linear problems. 13 K2 CO5

OR

- b) Explain the iterative procedure and modified iterative procedure for the analysis of material non-linearity Problems. 13 K2 CO5

### PART - C (1 × 15 = 15 Marks)

16. a) Derive the equation of motion by Hamilton's principle. 15 K3 CO3

OR

- b) Determine the natural frequencies of the system shown in fig. 15 K3 CO3
