Question Paper Code

13558

B.E. / B.Tech. - DEGREE EXAMINATIONS, APRIL / MAY 2025

Third Semester

Information Technology

(Common to Computer Science and Engineering)

20ITPC303 - COMPUTER ORGANIZATION AND ARCHITECTURE

Regulations - 2020

Duration: 3 Hours

Max. Marks: 100

**PART - A (MCQ) (10 × 1 = 10 Marks)**

Answer ALL Questions

- |  | <i>Marks</i> | <i>K – Level</i> | <i>CO</i> |
|--|--------------|------------------|-----------|
| 1. What is the primary role of the arithmetic and logic unit (ALU) in a computer?  | 1            | K1               | CO1       |
| (a) Storing data (b) Controlling input devices   |              |                  |           |
| (c) Performing arithmetic and logic operations (d) Coordinating output operations  |              |                  |           |
| 2. What is the characteristic of a random-access memory (RAM)?   | 1            | K1               | CO1       |
| (a) It is inexpensive and permanent (b) It has a long access time.   |              |                  |           |
| (c) Any location can be accessed in a short and fixed amount of time   |              |                  |           |
| (d) It retains data when power is turned off   |              |                  |           |
| 3. When dividing 0.75 by 0.25 using decimal arithmetic, what is the result?  | 1            | K1               | CO2       |
| (a) 3 (b) 0.3 (c) 30 (d) 7.5   |              |                  |           |
| 4. In floating-point multiplication, what is the exponent of the result?   | 1            | K1               | CO2       |
| (a) The sum of the exponents of the operands   |              |                  |           |
| (b) The difference between the exponents of the operands   |              |                  |           |
| (c) The average of the exponents of the operands   |              |                  |           |
| (d) The product of the exponents of the operands   |              |                  |           |
| 5. What is a control hazard in a pipelined processor?  | 1            | K1               | CO3       |
| (a) When an instruction depends on the result of a previous instruction  |              |                  |           |
| (b) When the pipeline stage is stalled   |              |                  |           |
| (c) When branch instructions affect the flow of control  |              |                  |           |
| (d) When there is a cache miss   |              |                  |           |
| 6. Which type of data hazard occurs when an instruction tries to write to a register before a previous instruction has read from it? | 1            | K1               | CO3       |
| (a) Read-After-Write (RAW) (b) Write-After-Read (WAR)  |              |                  |           |
| (c) Write-After-Write (WAW) (d) Read-After-Read (RAR)  |              |                  |           |
| 7. What is the primary method of communication in message-passing multiprocessors?   | 1            | K1               | CO4       |
| (a) Shared memory (b) Cache coherence  |              |                  |           |
| (c) Explicit message passing (d) Task-level parallelism  |              |                  |           |
| 8. What major economic opportunity of scale led to the development of cloud computing?   | 1            | K1               | CO4       |
| (a) Reduced operational costs (b) Enhanced server reliability  |              |                  |           |
| (c) Increased cooling efficiency   |              |                  |           |
| (d) Lower per-unit costs of Warehouse-Scale Computers (WSCs)   |              |                  |           |
| 9. What is a cluster in the context of parallel computing?   | 1            | K1               | CO5       |
| (a) A network of computers functioning as a single large multiprocessor over a local area network.                                   |              |                  |           |
| (b) A cluster of servers with separate memory but interconnected cores.  |              |                  |           |
| (c) A shared-memory multiprocessor system.   |              |                  |           |
| (d) A group of interconnected microprocessors within a single server.  |              |                  |           |

10. Which of the following are examples of memory technologies? 1 K1 CO6  
 (a) DRAM, SRAM, and magnetic storage media  
 (b) DRAM, SROM, and magnetic storage media  
 (c) DROM, SRAM, and magnetic storage media  
 (d) DRAM, RAM, and magnetic storage media

**PART - B (12 × 2 = 24 Marks)**

Answer ALL Questions

11. Define computer architecture. 2 K1 CO1  
 12. What is a program counter? 2 K2 CO1  
 13. What is sub-word parallelism? 2 K2 CO2  
 14. Define modified Booth's algorithm. 2 K1 CO2  
 15. Point out the concept of exceptions and interrupts. 2 K1 CO3  
 16. Draw the format for R-type, I-type and J-type instruction. 2 K2 CO3  
 17. Define the terms SISD, MIMD with examples. 2 K2 CO4  
 18. Explain MIMD and its significance in parallel computing. 2 K2 CO4  
 19. List the benefits of clustering in computer architecture. 2 K1 CO5  
 20. Discriminate UMA and NUMA. 2 K1 CO5  
 21. Distinguish between asynchronies DRAM and synchronous RAM. 2 K2 CO6  
 22. Distinguish Between Static RAM and Dynamic RAM? 2 K2 CO6

**PART - C (6 × 11 = 66 Marks)**

Answer ALL Questions

23. a) Discuss MIPS addressing modes with examples. 11 K2 CO1  
**OR**  
 b) Explain various instruction formats and illustrate the same with an example. 11 K2 CO1
24. a) Interpret the result of multiplying the following signed numbers using Booth's algorithm,  $A=(-34)_{10}=(1011110)_2$  and  $B=(22)_{10} = (0010110)_2$  where B is multiplicand and A is multiplier. 11 K3 CO2  
**OR**  
 b) Interpret the result of multiplying the following pair of signed 2's complement numbers using Booth's algorithm,  $A=(-13)_{10}=(110011)_2$  and  $B=(-20)_{10} = (101100)_2$  where A is multiplicand and B is multiplier. 11 K3 CO2
25. a) State and draw a simple MIPS datapath with control unit and explain the execution of ALU instruction. 11 K3 CO3  
**OR**  
 b) Explain the operation of the data path for an R-type, Load Word, branch, jump instructions in detail. 11 K3 CO3
26. a) Describe data level parallelism in SIMD and MISD. 11 K2 CO4  
**OR**  
 b) Explain in detail about hardware multithreading. 11 K2 CO4
27. a) Explain clusters in detail. 11 K2 CO5  
**OR**  
 b) Describe the working of warehouse scale computers in detail. 11 K2 CO5

28. a) Identify the various mapping schemes memory. 11 K3 CO6

**OR**

b) Discuss the methods used to measure and improve the performance of the cache. 11 K3 CO6
